

# **SY110 Forms**

Major Brian Hawkins, USMC

U.S. Naval Academy

Fall AY 2018

1 Review

2 Forms

## What we talked about last time

- Event-driven scripts
  - ▶ What are they?
- DOM *elements* and *attributes*
- How to manipulate HTML documents' rendering using JavaScript

So far: The only way we've been able to get user input is through `prompt()`

## Forms

- Getting user input from `prompt()`s can be a pain – especially if we need to obtain multiple values
- Forms allow us to
  - ▶ Get multiple values from a user at the same time
  - ▶ Text, sliders, buttons
  - ▶ No annoying pop-up boxes!
